FIRST SHOT.

Difference of Opinion as to Which Side It Came From.

Testimony of Eye-Witnesses of the Fight at Homestead.

The Average Reduction Proposed by the Company Which Precipitated the Strike Was Tweive Per Cent. and Affected About Three Handred Employes.

PITTSBURGH, July 15. - Chairman Oates announced in the opening of the investigation Thursday morning that the committee so far had searched only for facts, and was not ready to make a report. He declared it likely there would be no minority report

General Superintendent Potter was

the first witness. He described the de-

tails of steel-making and the work performed by the different classes of workmen. He said that the Homestead mills were the finest in the world and workmen made 50 per cent. better wages there than in any other plant. He said the average reduction proposed by the company, which precipitated the strike, was 12 per cent. About 800 men were affected. This reduction was made because laborers were getting more weges than in any other mill and the introduction of improved machinery increasing the amount of product increased the wages. The first disturbance that occurred was before the mill shut down; when he and Mr. Frick were hang in efligy. When one of the clerks of the company went to tear them down he was drenched with water from a hose. The morning of July 1 some of his foreman and men were stopped by others, who tried to keep them out of the mill. On July 2 he left the mill and returned on the boats Tide and Little Bill. On July 6, when the Pinkertons were taken to the works, he was accompanied by Deputy Sheriff Gray. As they drew near Homestead they saw the banks crowded with people, shouting and firing shots. He cau-tioned Deputy Sheriff Gray not to let the men commit any overt act. The crowd ran along the bank, following them up. He thought that they would go no further than the fence of the Carnagie works They landed the boats within the works. The strikers broke through the fence and commenced firing on them. Deputy Gray pacified the Pinkertons until the firing became heavy from the shore, when they returned the shots. He ordered them to quit. Three or four of the Pinkertons were wounded. The detectives then began getting out all of their arms. They then held a consultation and decided to allow the burges to remain while they took the wounded men away on the boat, as they thought the crowd would disperse and they could make a peaceful landing in a few hours. He did not feel disposed to make a forcible entry, as be had letters from Mr. Frick telling him not to commit any overt act.

Capt. F. Kennedy, of the steamer Little Bill, was a watchman on one of the Pinkerton barges. He detailed arrival of the Pinkerton guards and their trip up the Monongahela river. Near Homestead, they met the strikers' river patrol, who fired a sky-rocket to give warning. Up at the wharf, he said, men and women mingled, broke down the fence and fired on the barges. In answer to Boatner, Capt. Kennedy said about 50 of the Pinkertons were good shots, and usually picked off the strike-

The others were arrant skulkers. The witness attempted to imitate Mr. Boatner's southern drawl, and was flayed in

his examination for his pains. Andrew Huff was the next witness. He was on the barges during the fight. When the firing commenced from the shore, only a few of the Pinkertons tried to land. He came away on the Little Bill, when the wounded were brought to the city.

W. L. Danahy, a reporter on the Pittsburgh Leader, was the next witness. He arrived at Homestead about 8 o'clock, after the first fight. He heard some firing at that time, but did not know where it came from. He could not get near enough to ascertain. He did not see the surrender of the Pinkertons

William Weihe, president of the Amalgamated association, was then placed on the stand. He said that there were 25,000 skilled workmen in the association, of which the majority were Americans. The association did not countenance

any act of violence on the part of its members in keeping out non-union men. H. C. Frick, president of the Carnegie Steel Co., who was then questioned by Chairman Oates, said that some of the workmen had testified that the poorest paid men, and those who had the hardest work, suffered most under the reduction. He selected the wages during the month of May, just before the trouble, admitting though that wages were a little large. Out of the 300 men employed on the 110-inch plate mill only 82 were reduced. In 1882, 200 men were employed in the same department, and by the change in the scale then, 196 were affected and 100 were not. More men were affected by the sliding scale than any other.

Mr. Frick was asked why he proposed reduction of wages. He stated that the first reason was reduced prices received for the product, and, second, the increased tonnage by introduction of improved machinery, which increased the pay of the men, they being paid ac-

cording to tonnage. "What proportion of steel billets do you produce?" asked Mr. Oafes. "About 12 per cent of the total out

put in the United States. We do not control the market by any means." "Will you state the approximate cost of producing steel billets?"

"I declined to answer that question the other night. I do so now. I do not care to go into the question of

"What is the cost of the entire plant
